50X1-HUM

1. The two main classifications used by the Communist Party of Poland are (a) POUPNE (Confidential) and (b) TAJNE (Secret). The former classification permits correspondence of this type to be opened by any office employee. The American equivalent is restricted or confidential. Reports classified "TAJNE" (secret) can be read only by specific addressees. They are generally routed from individual to individual.
2. All high level correspondence and reports are classified SCISLE TAJNE (Top Secret). They differ from reports labelled TAJNE only in the matter of handling. Once a report so labelled is read by the addressee, it is withdrawn completely from circulation. Paraphrasing the report or making extracts or copies is considered a grave security violation.
3. As a general rule, any manner of correspondence having bearing on Communist aims, objectives, methods of operation, Party membership and the like is considered Top Secret. because of rigid Party discipline in the matter of handling correspondence, there exists a tendency to overclassify documents.
